

CERTIFICATE

To whom it may concern

The product Trelleborg exclusively produces for the company Seaflex is made of SBR elastomer which is a polymer authorized to be used in contact with potable water. Being a rubber material, several additives are also incorporated in the composition to reach the suitable performance in fields.

As part of our Trelleborg policy, the Seaflex hose does not contain dangerous substances such as listed in the Reach legislation 1907/2006, heavy metals, phthalates... likely to be released in aqueous environment.

The core material of our hose complies with the FDA legislation 177.2600 in term of composition for polymer and additives, a worldwide used standard for food compliance.

The Seaflex product has been developed to be in contact with water over a long period of time however specific countries/applications using potable water may request additional specific testing.
